Office Action Summary

Application No.

10/002,967

Applicant(s)

ASHKENAZI ET AL.

Examiner

Jon Eric Angell

Art Unit

1635

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 05 October 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 58-70 and 74-84 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 58-70 and 74-84 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 24 October 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

This Action is in response to the communication filed on 10/5/2005. The amendment filed 10/5/2005 is acknowledged. The amendment has been entered. Claims 58-70 and 74-84 are currently pending in the application and are addressed herein.

Applicant's arguments are addressed on a per section basis. The text of those sections of Title 35, U.S. Code not included in this Action can be found in a prior Office Action. Any rejections not reiterated in this action have been withdrawn as being obviated by the amendment of the claims and/or applicant's arguments.

Information Disclosure Statement

The information disclosure statement (IDS) submitted on 10/5/2005 is acknowledged. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 58-62 and 74-77 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the

Art Unit: 1635

relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The claims are drawn to isolated nucleic acids encoding polypeptides wherein the nucleic acids have at least 80%, 85%, 90%, 95% or 99% sequence identity with a nucleic acid encoding particular disclosed sequence (SEQ ID NO: 59). The claims do not require that the nucleic acids possess any particular conserved structure, or other disclosed distinguishing structural feature.

To provide adequate written description and evidence of possession of a claimed genus, the specification must provide sufficient distinguishing identifying characteristics of the genus. The factors to be considered include disclosure of complete or partial structure, physical and/or chemical properties, functional characteristics, structure/function correlation, methods of making the claimed product, or any combination thereof. In this case, the only factor present in the claim is a partial structure in the form of a recitation of percent identity and the functional characteristic that the sequence encodes a polypeptide which can induce chondrocyte redifferentiation. There is not even an identification of any particular portion of the structure that must be conserved or that is required for the indicated function. Accordingly, in the absence of sufficient recitation of distinguishing identifying characteristics including lack of a structure/function relationship, the specification does not provide adequate written description of the claimed genus.

Vas-Cath Inc. v. Mahurkar, 19USPQ2d 1111, clearly states “applicant must convey with reasonable clarity to those skilled in the art that, as of the filing date sought, he or she was in possession of *the invention*. The invention is, for purposes of the ‘written description’ inquiry, *whatever is now claimed*.” (See page 1117.) The specification does not “clearly allow persons of

Art Unit: 1635

ordinary skill in the art to recognize that [he or she] invented what is claimed.” (See *Vas-Cath* at page 1116). As discussed above, the skilled artisan cannot envision the detailed chemical structure of the encompassed genus of molecules, and therefore conception is not achieved until reduction to practice has occurred, regardless of the complexity or simplicity of the method of isolation. Adequate written description requires more than a mere statement that it is part of the invention and reference to a potential method of isolating it. The compound itself is required. See *Fiers v. Revel*, 25 USPQ2d 1601 at 1606 (CAFC 1993) and *Amgen Inc. v. Chugai Pharmaceutical Co. Ltd.*, 18 USPQ2d 1016.

Applicant is reminded that *Vas-Cath* makes clear that the written description provision of 35 U.S.C. §112 is severable from its enablement provision (see page 1115).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 58-64, 66 and 68-84 are rejected under 35 U.S.C. 102(e) as being anticipated by US 2002/0055139 A1 (HOLTZMAN et al., published May 9, 2002 with priority to at least May 14, 1999).

HOLTZMAN teaches an isolated nucleic acid that encodes a polypeptide (human A236 protein) that is 100% identical to SEQ ID NO: 59 (See attached sequence alignment), (e.g., see

Art Unit: 1635

HOLTZMAN paragraph [0129] describing Figure 23, SEQ ID NO: 23 and SEQ ID NO: 24).

Since the nucleic acid taught by HOLTZMAN encodes a polypeptide that is 100% identical to SEQ ID NO: 59, the nucleic acid sequence taught by HOLTZMAN would necessarily encode the extracellular domain of SEQ ID NO: 59. Furthermore, the nucleic acid taught by HOLTZMAN would necessarily hybridize to a nucleic acid sequence encoding SEQ ID NO: 59 under stringent conditions. HOLTZMAN also teaches that the nucleic acid encoding human A236 can be inserted into an expression vector and the expression vector can be placed in a host cell such that the polypeptide is produced in the cell (e.g., see the abstract; paragraphs [0081], [0318] and [0638]). HOLTZMAN specifically teaches that the host cell can be a yeast cell, an E. coli cell or a mammalian cell (see paragraphs [0641], [0644], and [0650]). Furthermore, the nucleic acid taught by HOLTZMAN (which is 100% identical to SEQ ID NO: 58) is a nucleic acid that consists of an at least 30, 50, 60, 70, 80, 90 and 100 nucleotide fragment of the nucleic acid of SEQ ID NO: 58 which would necessarily hybridize to the complement of SEQ ID NO: 58 under the conditions set forth in claim 78.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1635

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 63, 65 and 67 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 2002/0055139 A1 (HOLTZMAN et al., published May 9, 2002 with priority to at least May 14, 1999).

HOLTZMAN teaches an isolated nucleic acid that encodes a polypeptide (human A236 protein) that is 100% identical to SEQ ID NO: 59, as indicated above (e.g., see HOLTZMAN paragraph [0129] describing Figure 23, SEQ ID NO: 23 and SEQ ID NO: 24).

HOLTZMAN does not teach that the isolated nucleic acid comprises a sequence encoding the polypeptide of SEQ ID NO: 59 lacking its associated signal peptide or an isolated nucleic acid comprises a sequence encoding the extracellular domain of polypeptide of SEQ ID NO: 59 lacking its associated signal peptide.

However, HOLTZMAN does teach the structural domains of human A236 protein, including the signal peptide, extracellular domain, transmembrane domain and cytoplasmic domain as well as the cleavage product that is the mature form of the A236 protein (i.e., amino

Art Unit: 1635

acids 19-373) (e.g., see paragraphs [0302] and [0601]). HOLTZMAN also teaches that antibodies can be produced that specifically bind to each domain of the polypeptide (see paragraph [0632]).

Therefore, it would have been *prima facie* obvious to one of ordinary skill in the art at the time the invention was made to create make a nucleic acid that comprises a sequence encoding the mature form of the A236 protein (which is also the polypeptide of SEQ ID NO: 59 lacking its signal peptide) as well as a nucleic acid that comprises a sequence encoding the extracellular domain of A236 lacking its associated signal peptide with a reasonable expectation of success.

One of ordinary skill in the art would have been motivated to make the nucleic acid sequence encoding the mature form of the A236 and the nucleic acid sequence encoding the extracellular domain of A236 protein lacking its associated signal peptide in order to produce the mature form of the protein or to produce polypeptides which could then be used to make antibodies specific for non-signal peptide domains of A236. It is noted that making a vector that expresses a protein of interest and making antibodies are conventional and routine, as such the nucleic acids could have been made with a reasonable expectation of success.

Response to Arguments

Applicant's arguments filed 10/5/2005 have been fully considered.

With respect to the rejection of claims under 35 USC 112, 2nd paragraph, the cancellation of claims 71-73 renders the rejection moot.

With respect to the rejection of claims under 35 USC 112, 1st paragraph (Written Description) Applicants arguments have been fully considered. With respect to the limitations “signal peptide”, “extracellular domain” and “extracellular domain lacking its associated signal peptide” it is acknowledged that the specification has provided adequate description for these specific limitations. With respect to Applicants arguments that the specification has provided a detailed description of the chondrocyte redifferentiation assay (Example 126) and that one of skill in the art would be able to use the assay to identify which of the claimed sequences encode polypeptides that can induce chondrocyte redifferentiation, the arguments are not persuasive. Applicants assert that Example 126 of the instant application provide detailed protocols for the chondrocyte redifferentiation assay. Applicants contend that by following the instant disclosure, one of skill in the art can easily test whether a claimed sequence encodes a variant PRO363 polypeptide that induces chondrocyte redifferentiation. Applicants also argue that methods for determining percent identity between two sequences is disclosed in the specification, as well as guidance to make changes to PRO polypeptide sequences without adversely affecting its activity. Applicant urges that such provides basis for the newly claimed genus of sequences which encode polypeptides with at least 80-99% sequence identity to SEQ ID NO: 59 and *which are functionally defined as being able to induce chondrocyte redifferentiation*. Applicant points to the specification’s disclosure of methods for the determination of percent identity, and assays for identification of polypeptides and for support of the functional limitation in the claims. Applicants urge that the skilled artisan can readily test sequences for identity and whether or not the encoded polypeptides can induce chondrocyte redifferentiation. Therefore, Applicants contend that one of skill in the art would be able to identify and make the claimed sequences.

Applicants' arguments have been fully considered, but are not persuasive. The courts have specifically stated that the skilled artisan cannot envision the *detailed chemical structure* of an encompassed polypeptide until the structure is disclosed, and therefore conception is not achieved until reduction to practice has occurred, regardless of the complexity or simplicity of the method of isolation. Adequate written description requires more than a mere statement that it is part of the invention and reference to a potential method of isolating it. The compound itself is required. See *Fiers v. Revel*, 25 USPQ2d 1601 at 1606 (CAFC 1993) and *Amgen Inc. v. Chugai Pharmaceutical Co. Ltd.*, 18 USPQ2d 1016. In the instant case only SEQ ID NO: 59 (PRO363) has been disclosed as being able to induce chondrocyte redifferentiation. However, the specification does not disclose any variants of the PRO363 polypeptide (SEQ ID NO: 59) which can induce chondrocyte redifferentiation. One cannot describe what one has not conceived. See *Fiddes v. Baird*, 30 USPQ2d 1481 at 1483. In *Fiddes*, claims directed to mammalian FGF's were found to be unpatentable due to lack of written description for that broad class. The specification provided only the bovine sequence.

To provide evidence of possession of a claimed genus, the specification must provide sufficient distinguishing identifying characteristics of the genus. The factors to be considered include disclosure of complete or partial structure, physical and/or chemical properties, functional characteristics, structure/function correlation, methods of making the claimed product, or any combination thereof. In this case, the only factors present in the claims are a partial structure in the form of a recitation of percent identity, and a requirement that the polypeptide can induce chondrocyte redifferentiation. ***There is no identification of any particular portion of the structure that must be conserved in order to conserve the required function (induction of***

Art Unit: 1635

chondrocyte redifferentiation). Clearly, such does not constitute disclosure of a representative number of examples of, nor adequate written description for, the claimed genus.

Therefore, Applicants arguments are not persuasive.

With respect to the rejection of claims 58-62 and 74-77 under 35 US 112, 1st paragraph (scope of enablement), Applicants' arguments are persuasive and the enablement rejection of the claims is withdrawn.

With respect to the rejection of claims under 35 USC 102(e) and 35 USC 103(a), Applicant argue that the HOLTZMAN reference (U.S. Publication No. 2002/0055139 A1) is not prior art in view of the Declaration under 37 CFR 1.131 by Drs. Desnoyers et al. (submitted 10/5/2005). However, the Declaration filed on 10/5/2005 under 37 CFR 1.131 has not been considered because it is defective. Specifically, the Declaration is defective because it is not signed. Since the Declaration has not been considered, it is ineffective to overcome the HOLTZMAN reference (U.S. Pub. No. 2002/0055139 A1). Since the Declaration is ineffective to overcome the HOLTZMAN reference Applicants arguments are not persuasive and the rejection of the claims under 35 USC 102(e) and 35 USC 103(a) are maintained.

Conclusion

No claim is allowed.

Art Unit: 1635

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jon Eric Angell whose telephone number is 571-272-0756. The examiner can normally be reached on Mon-Fri, with every other Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Wang can be reached on 571-272-0811. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
